

Integrated ColdFire® V3 Microprocessor

MCF530X

Last Updated: May 9, 2024

The MCF5307 is a high-performance (70 MIPS), cost-effective, highly integrated microprocessor designed for embedded control applications. The MCF5307 combines a ColdFire® V3; processor core with a multiply-accumulate (MAC) module, DRAM controller, direct memory access (DMA) controller, timers and parallel and serial interfaces. The time required for system design and implementation is greatly reduced by packaging common system functions on-chip and providing glueless interfaces to 8- 16- and 32-bit DRAM, SRAM, ROM and I/O devices.
