

## JN5189 and JN5188: Ultra-low Power Wireless Intelligent Connectivity

# High Performance and Ultra-low power MCU for Zigbee® and Thread with Built-in NFC option

JN5189/88 consists of advanced and ultra-low power wireless microcontrollers for Zigbee, Thread and IEEE® 802.15.4 that integrates a comprehensive mix of analog and digital peripherals. These highly integrated devices allow developers to create products that have rich features and contactless NFC commissioning.

### OVERVIEW

The JN5189/88 portfolio is designed to power the next generation of very low current wireless devices, supporting Zigbee 3.0, Thread, and IEEE 802.15.4. It includes several low-power modes and ultra-low TX and RX power consumption, which enables devices powered by JN5189/88 to have a longer battery life. With -100 dBm RX sensitivity and up to +11 dBm TX output power, JN5189/88 offers reliable and robust communications performance.

JN5189/88 is powered by an Arm® Cortex® M4 MCU and can run up to 640 KB on-board flash and 152 KB SRAM, with enough room and flexibility for complex applications and Over-the-Air (OTA) upgrade capability without external memory. It has a rich set of MCU peripherals and multiple serial communication interfaces for embedded connected applications with the quad serial flash memory controller, SPIFI, which can be used to extend non-volatile memory for data or code.

### TARGET APPLICATIONS

-  Zigbee 3.0 network
-  Thread networks
-  Home and building automation
-  Sensor network
-  Smart lighting
-  Smart metering

### NFC OPTION

JN5189T/88T has an integrated NFC NTAG to implement contactless NFC commissioning, simplifying the network build-out while saving energy and increasing safety.

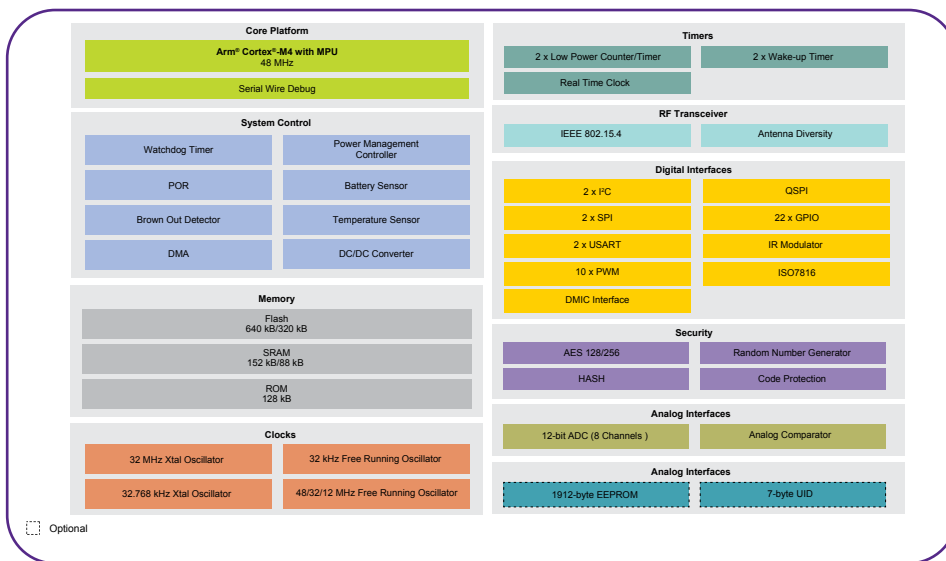

### SUPPORT

The development kit's rich components include a control bridge with an NFC reader, a generic switch node, a light/sensor node, and a USB dongle that help enable quick assembly for small wireless networks.

The JN5188/JN5189 development platform comes with an integrated programmer and debugger along with a suite of application examples in a complete software development kit (SDK). The platform is also compatible with the NXP MCUXpresso software suite. MCUXpresso tools and enablement provide a smooth software experience across all NXP devices and offer a faster path for adding IEEE 802.15.4 capability to existing code based on other NXP devices. NXP also offers test tools to allow developers to evaluate and test efficiently.

## JN5188/JN5189 BLOCK DIAGRAM

### SOFTWARE AND TOOLS

NXP's **MCUXpresso software and tools** offer comprehensive development solutions designed to optimize, ease and accelerate embedded system development of applications based on Cortex-M core devices, including members of NXP's portfolio of general-purpose microcontrollers and i.MX RT crossover MCUs.

### JN5188/JN5189 MCU FEATURES AND BENEFITS

Features	Benefits
<b>System Current Consumption</b> 7.4 mA @ +0 dBm TX, 4.3 mA Rx peak current	Extends battery life and allows for optimized form-factors
<b>RF Performance</b> -100 dBm RX sensitivity Up to +11 dBm TX output power	High sensitivity allows for a more robust link budget and integrated balun reduces system size and cost; high TX power helps enable long-distance transition
<b>Processing and Memory</b> 48 MHz Arm® Cortex®-M4 core Up to 640 KB/320 KB flash, 152 KB/88 KB RAM	High-performance Arm core with memory options for the connectivity stack (Zigbee, Thread) and user applications
<b>Complete Connectivity</b> Zigbee® 3.0, Green Power, Thread™	Zigbee 3.0, Green Power and Thread complete solutions and reference designs
<b>NFC Communications</b> NFC Forum Type 2 Tag with integrated UID and memory	Simplifies the device pairing and provisioning improving the user experience
<b>Scalability</b> Hardware compatible with QN9090 and K32W061 product families	Allows for fast-moving multi-protocol applications by only updating firmware without hardware design change
<b>Environmental Conditions</b> Wide temperature range: -40 °C to +125 °C	Applicable in various environments
<b>Development Environment</b> Compatible with IAR and MCUXpresso IDEs	Example projects support industry-standard IAR toolchains; MCUXpresso support allows for easy code migration based on other NXP devices

### JN5189/88 PORTFOLIO

Part Number	Flash / RAM (KB)	NTAG®	Package (mm)
JN5189T	640/152	Y	6 x 6 QFN
JN5189	640/152	N	6 x 6 QFN
JN5188T	320/88	Y	6 x 6 QFN
JN5188	320/88	N	6 x 6 QFN

Part Number	Description
JN5189-DK006	Development kit for Zigbee®, Thread™ and IEEE® 802.15.4 connectivity/enabement
OM15080-JN5189	USB dongle preprogrammed with a Zigbee, Thread, and IEEE 802.15.4 host stack
