Information Obtained From Checklist or Vendor			
Input	**Type**	**Purpose**	**Checklist Ref**
Uses Micro-AB	☐	**Check this box for an EH which uses a Micro-AB receptacle instead of a Standard-A receptacle. It will be automatically selected for OTG devices.**	**P15a**
Supports Sessions	☐	**Check this box if the OTG A-UUT or EH with Micro-AB receptacle does not keep V BUS enabled all the time that the ID pin is held low. Check this box for an EH with Standard-A receptacle which does not keep V BUS high all the time it is powered up. In either case it is assumed that SRP or ADP is available to detect the presence of a device.**	**PI10**

Input	Type	Purpose	Checklist Ref
SRP as A-device	☐	**Check this box if the UUT, as an A-device, supports detecting, and acting on, an SRP pulse generated by a connected device.**	**PI13**
HNP as A-device	☐	**Check this box if the UUT, as an A-device, supports HNP to enable the connected B-device to become host if it so requires.**	**PI13**
HNP Polling as A-device	☐	**Check this box if the UUT, as an A-device, supports HNP polling. If it does it is allowed to remain as host, for as long as the other device does not set its Host Request Flag.**	**PI13**
ADP as A-device	☐	**Check this box if the UUT, as an A-device, supports ADP probing to detect the presence or otherwise of a connected device.**	**PI13**
SRP as B-device	☐	**Check this box if the UUT, as a B-device, supports generating an SRP pulse in order to start a session (cause the connected A-device to turn on V BUS).**	**PI20**
HNP as B-device	☐	**Check this box if the UUT, as a B-device, supports HNP to allow it to become host if it so requires.**	**PI20**
ADP as B-device	☐	**Check this box if the UUT, as a B-device, supports ADP sensing and probing to detect the presence or otherwise of a connected device.**	**PI20**
FS Not Available	☐	**Check this box if UUT does not fully support full-speed operation. This is not permitted for an OTG device, but may be for an Embedded Host.**	**PI11, PI18**

Input	Type	Purpose	Checklist Ref
IA_VBUS_RATED	100 mA	The rated output current of an A-device in mA units.	PI8
bMaxPower	100 mA	bMaxPower (sic) is the highest current, in mA, declared in any of the device's Configuration Descriptors. This value ignores current drawn under the Battery Charging provisions.	PI17
TPWRUP_RDY	30 S	Maximum time, in seconds, specified by vendor from powering on the UUT until it is ready to perform USB functionality. By default this is set to 30 seconds, but a vendor is permitted to specify a longer time.	PI24
TA_WAIT_BCON max	30 S	The maximum time, in seconds, that V BUS is left on for by an A-device, in the absence of a B-device connecting. The default value is thirty seconds. A vendor is permitted to specify a longer time, but should be aware that this will have an impact on the time taken for, and therefore possibly the cost of, compliance testing.	PI10

Input	Type	Purpose	Checklist Ref
Unknown Dev (No HNP)	VID: 1A0A PID: 0201	The test will use the VID/PID combination specified during tests for error messages, when an unknown B-device, not capable of HNP, is connected. A default value (1A0A/0201) is used, but any other device not on the UUT's TPL may be defined here.	-
Unknown Dev (HNP)	VID: 1A0A PID: 0202	The test will use the VID/PID combination specified during tests for error messages, when an unknown B-device, capable of HNP, is connected. A default value (1A0A/0202) is used, but any other device not on the UUT's TPL may be defined here.	-

High Speed & Full Speed Compliance Tests

Host High-speed Signal Quality ☒ Pass ☐ **Fail** ☐ N/A

These tests measure the ability of transmitters to do valid high speed signaling. High speed signal quality is measured on upstream ports. A high speed scope with differential probes is used. Signaling data is captured with the scope and then translated to an eye pattern. The signal quality eye patterns obtained from the measurements must agree with the transmit eye patterns in the USB 2.0 Specification.

Port	1
EL_2: Data Rate	Pass
EL_3: Eye Pattern	Pass
EL_6: Rise and Fall Time	Pass
EL_7: Monotonic	Pass

Host Controller Packet Parameters ☒ Pass ☐ **Fail** ☐ N/A

This test measures the amount of time it takes hosts and devices to respond. It also verifies Host generated SYNCs and EOPs.

EL_21: (32bit)	**32bit/32bit**	☒ Pass	☐ **Fail**	☐ N/A
EL_25: (8bit)	**8bit**	☒ Pass	☐ **Fail**	☐ N/A

EL_41: (<=3ms)	122us	☒ **Pass**	☐ **Fail**	☐ **N/A**

Host Test J/K, SE0_NAK (EL_9)   ☒ **Pass**   ☐ **Fail**   ☐ **N/A**

The USB-IF no longer requires EL_8: Test_J and Test_K to be performed as a condition for USB Certification. Measurement of EL_9: Test_J, Test_K and SE0_NAK is still a requirement for certification. EL_9 is defined in the USB 2.0 Test Specification and measures the data line voltage when not driven.
